### Product Description

Quality British manufactured 10mm copper pipe inserts for oil pipes. Approved by OFTEC to ensure airtight joints.

Sold in various pack sizes: x10, x25, x50 or x100

To ensure a leakproof oil line when installing copper pipes, it is always recommended to use 10mm copper pipe inserts when making compression joints in the line.

These ensure a tight seal and means the olive does not crush the copper pipe when being fitted.

### Main Features

- Essential when installing copper pipe
- Ensures air tight joints when using compression fittings
- For use with 10mm pipe (8mm ID)
- Available in packs of x10, x25, x50 & x100
